Be faster.
Be visible.

(the two things that compound)

1

Part 1: AI

Do more than before.

2

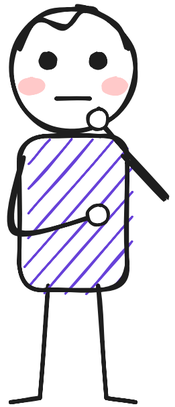

Part 2: Video

Let people see you do it.

This isn't about the company.

Parikshit, how long to edit a video like this?

(out loud, please)

A day and a half.
Now one hour.

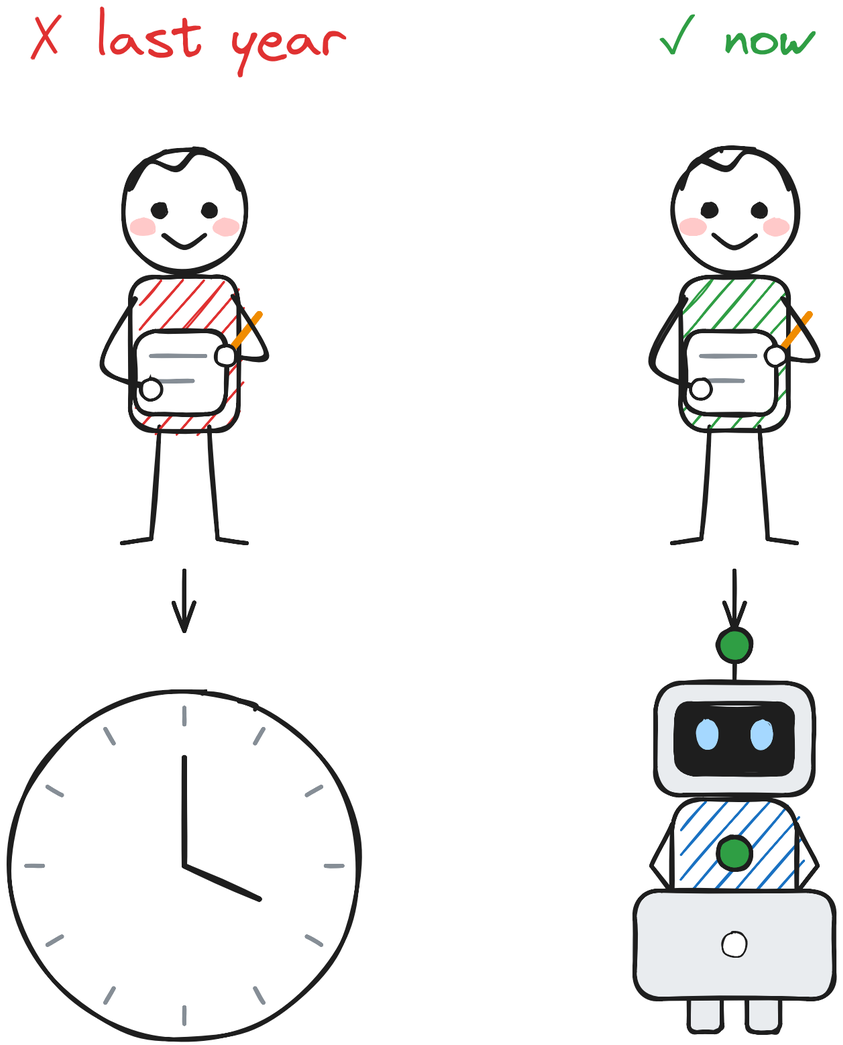

Same editor, same output. I spent a week building the thing that does the b-roll.

1 hour

and he still
makes every call

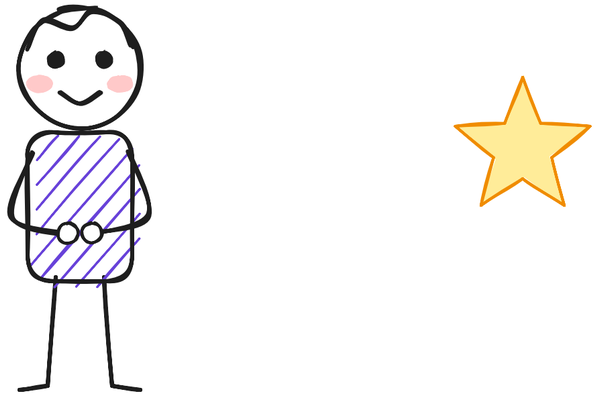

Yesterday's pace doesn't cover it.

It used to be enough to be good.
Now it's good, at volume.

Raj, who gets promoted?

(the one doing last year's job, or the one who changed it?)

How to find yours.

1

Write the workflow down

Every step, in order.

2

Mark the slow steps

Where does time go?

3

Hand it to Claude

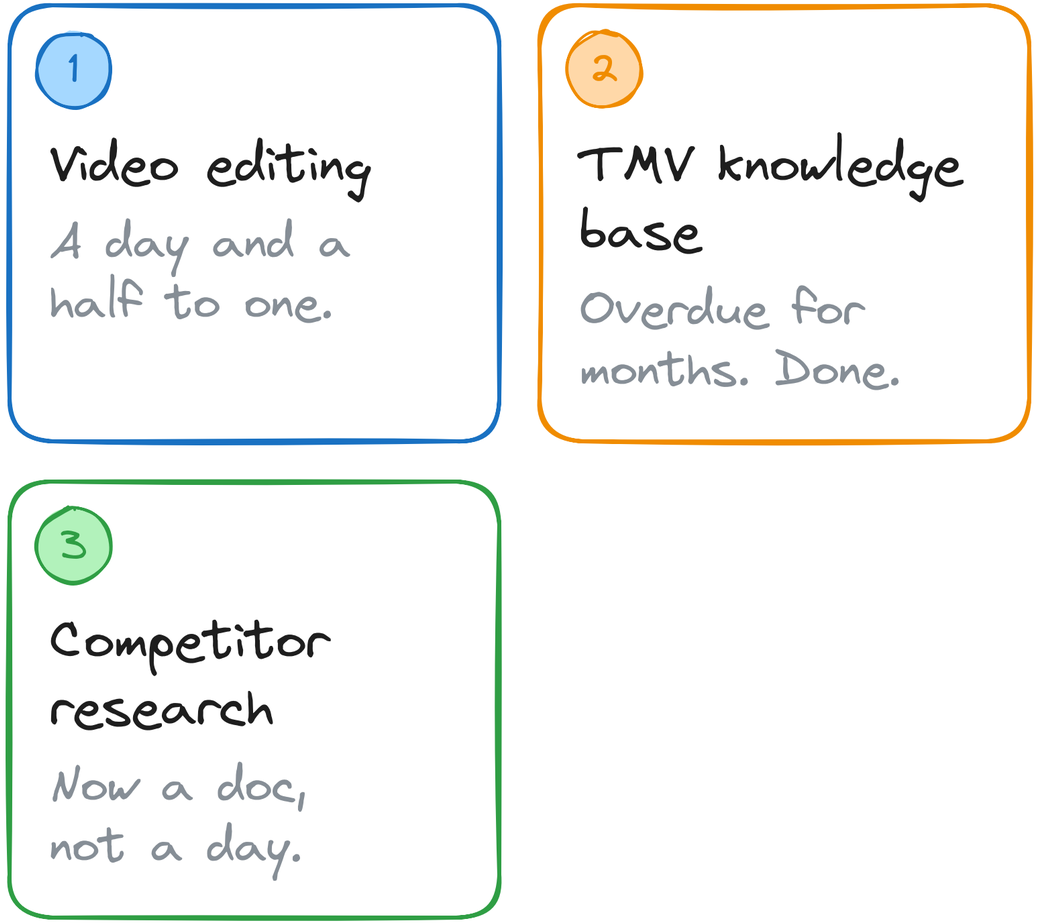

Ask where the waste is.

4

Build the smallest thing

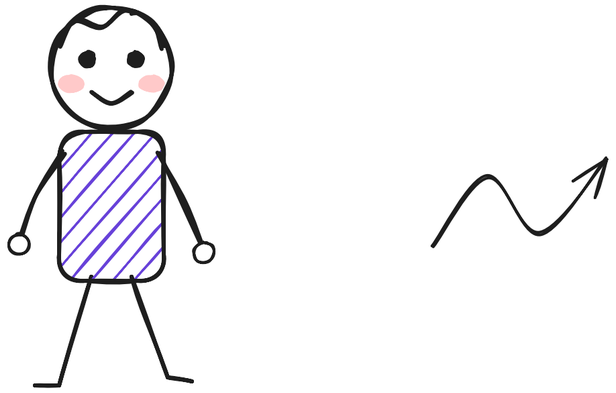

A skill, an MCP, a doc.

You don't have to automate it. Simplifying counts.

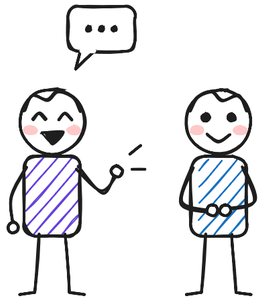

Which is why the next part

just got cheap.

Hands up.

1

Recorded yourself on camera this year?

Any platform. Any length.

2

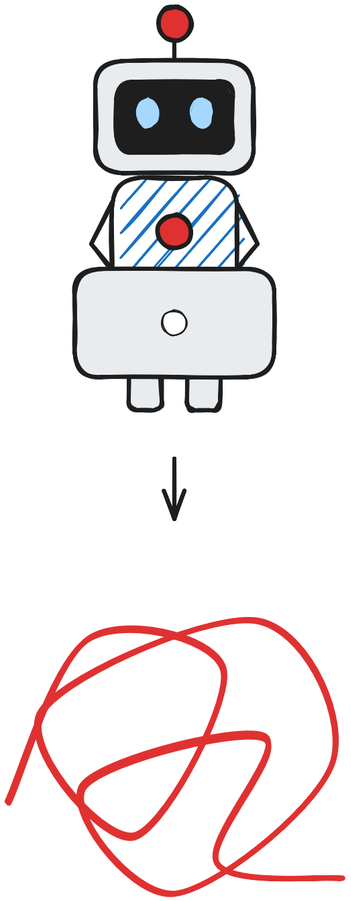

Think you'd be bad at it?

Be honest.

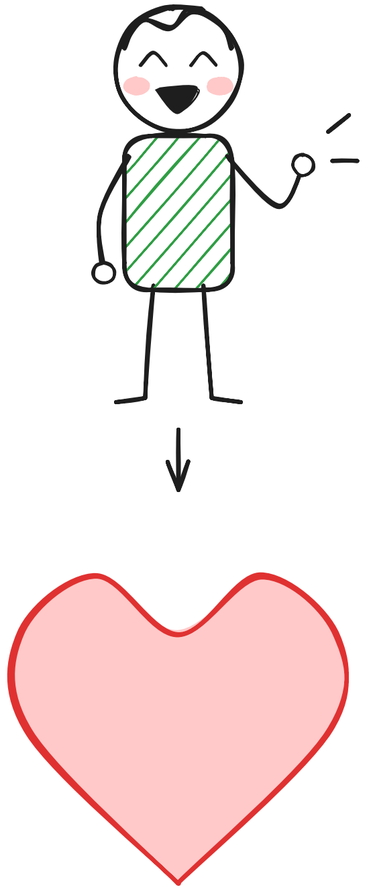

Text got cheap.
Faces didn't.

Everyone's publishing more than ever,
and almost nobody can say it to a lens.

✗ more text

✓ a real person

Why bother posting it?

1

Speaking compounds

Meetings and calls get easier.

2

It's a credential

It changes a job search.

3

It forces clarity

You have to actually get it.

The four reasons you won't.

1

I'm camera shy

Record alone. Shut the door.

2

I'll forget my lines

Read it. Don't memorise it.

3

I've nothing to say

Whatever you did this week.

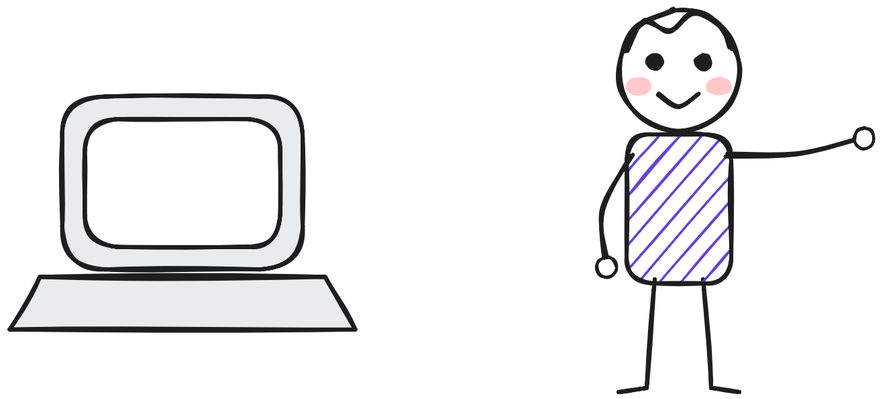

4

No time, no gear

Phone, window, one take.

The teleprompter I built

(30 seconds, then we move on)

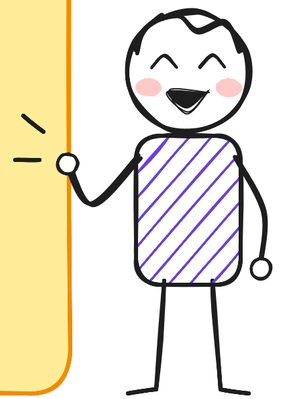

You already have the content.

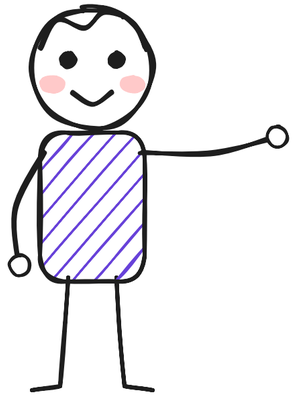

(45 seconds, that's it)

the whole format:

Here's the experiment I ran. Here's what happened. Here's what I'd do differently.

Two doors.

1

Do it for yourself

Your name, your topic.

2

Do it with us

TMV and the other brands.

One workflow on paper.

One 60-second video.

(this week)
